Enhancing Security on Tailscale

If you have a home server and want to set it up as an exit node, you can route your traffic through your home server when using public Wi-Fi for security protection.

Installing Firewall (UFW):

Ensure your package list is updated:

    sudo apt update

Install UFW:

    sudo apt install ufw

Enable the firewall:

    sudo ufw enable

Check firewall status:

    sudo ufw status verbose
